1. Introduction

As part of their commitment to providing world-leading execution services Oslo Børs has formed a strategic partnership with the London Stock Exchange Group (“the Group”). This will see the migration of the cash equities and fixed income markets to the TradElect platform with Infolect used for market data distribution.

The purpose of this document is to describe the mandatory dress rehearsal activities that will take place on **Saturday 27 February 2010**. Further documentation for the final dress rehearsal and ‘go live’ activities will be published nearer the time.

1.1 Version Control

Version No.	Description	Date
1.0	Published	February 2010
1.1	Updated test criteria	22 February 2010

Amendments made to the original content, will be identified using a series of side bars as illustrated opposite.

2. Test overview

Customers are required to logon with a minimum of 1 trading and 1 information connection per software used and to test all Trader Groups planned for use in production.

Both Oslo Børs and the Group recommends that customers test with their full production ‘go live’ configuration of enablements and connections during all dress rehearsals. However, reconfiguration of test servers/applications to mirror production configuration for participation in the dress rehearsal is permissible.

Members trading in both equity and fixed income markets are expected to perform functional testing in both markets. In addition, primary dealers and Norges Bank are expected to participate in issuing auctions and buy back auctions.

During the test session customers are required to perform the following activities:

- verify connectivity to the TradElect trading system and the correct logon to the Oslo cash and equity markets with a minimum of 1 trading connection per software used
- verify connectivity and logon to Infolect with a minimum of 1 USAP per software used
- verify the correctness of the main trading functions provided through proprietary or third party software applications
- verify the correct message handling of the market data feeds through Infolect

At the end of the test session, customers are required to:

- restore/rollback their software applications back to the previous production versions if required
- where applicable, restore servers/applications back to test configuration for connectivity to CDS
- confirm via email that testing has been successful, (see section 2.8)

We would like to remind all members of their responsibility for the correct operation of their applications after any roll forward/rollback procedure and should satisfy themselves at the end of the dress rehearsal that they are ready to commence trading as normal on the next trading day.

Members will be able to view a real-time schedule on the day's activities on the following website:

<http://www.londonstockexchange.com/weekendactivitymonitor/>

In advance of the test, members are requested to contact Oslo Børs to confirm their attendance and contact details for each software instance (i.e. email, phone (landline and mobile), software represented).

2.1 Pre-rehearsal Activities

Before the dress rehearsal, members are requested to have completed all appropriate testing where necessary:

- Conformance testing on TradElect and/or Infolect if required
- General Customer Development Service (CDS) testing covering trading, market data and post trading checks
- Production enablement setup
- Technical network, application and hardware changes, (see Appendix A for production IP address details)
- ISVs to distribute the appropriate software and instructions to members

Members are also requested to familiarise themselves with related documentation for the Oslo Børs cash equities and fixed income market migration to TradElect. Website links can be found in section 2.9.

Members will receive Idle Polls and Reference Data on the G01-G15 Service Channels prior to the dress rehearsal. However, Telnet or other TCP connectivity will not be available until the day of the rehearsal.

Members already connecting to TradElect for existing markets (London, Borsa Italiana and JSE) should be aware that GTD/GTT (Good Till Date/Good Till Time) order cancellation/expiry messages sent on the morning of the dress rehearsal should be ignored, as all these orders will then be restored automatically for the next trading day.

2.2 Market Data

Reference Data will be sent out at the start of the dress rehearsal to aid customer testing. The instrument effective dates will be configured for the date of the dress rehearsal therefore **customers must perform a full reference data download to ensure they have the correct instrument reference data**. Failure to do this may result in customers being unable to participate in the trading phase of the dress rehearsal.

Oslo Indices will be available during the dress rehearsal and messages will be disseminated via the G13 Service Channel. Oslo News messages will also be available and messages will be disseminated via the G12 Service Channel.

2.3 Reference Prices

All instruments will have their reference prices set to the prices of the previous day as per a normal trading day. This is to ensure that realistic prices are entered by the members during the test session.

Closing prices for equity segments only will be disseminated via Infolect after Friday market close ahead of the dress rehearsal.

2.4 Session Timetable

All times are in Central European Time (CET).

	Start	End
Infolect Connectivity	08:30	16:00
Infolect Reference Data (including line block at 09:10 to test re-requesting)	09:00	09:45
TradElect Connectivity	10:30	16:00
TradElect Functional Testing	11:00	16:00
TradElect High Volume Period	12:00	12.30

The above schedule of information will be updated in real-time during the dress rehearsal via:

<http://www.londonstockexchange.com/weekendactivitymonitor/>

2.5 Market Period Schedules

The business schedules to be followed for the dress rehearsal can be found in Appendix B

Any orders remaining on the order book at the end of the dress rehearsal will not be deleted by the Exchange but will be cleared down at the end of the day.

2.6 Test Requirements

As a minimum, members should carry out the following:

Logon procedure

- Connect each trading application to TradElect Secure (SI) Trading Interface using a minimum of 1 connection per software used
- Connect each market data application to the Infolect Interactive (II) using a minimum of 1 USAP per software used

Trading activity (If supported)

The following types of messages are to be performed a **minimum of 5 times** per message:

- Enter Orders (different market mechanism and order types ('P' and 'A' capacity, where applicable))
- Modify Orders (including: size, price, date and time validity, participant reference, client reference)
- Cancel Orders ('P' and 'A' capacity, where applicable)
- Enter Trade Report - Single sided only for equity members, single sided and dual sided for fixed income members (optional, minimum of 1 message where applicable)
- Own Order Book Download (optional, minimum of 1 message)
- Own Trades Book Download (optional, minimum of 1 message)
- Check all other appropriate ISV/Software trading functionality

In addition to the above customer test activities, Oslo Børs will undertake the following activities:

- Halt and resume individual instruments
- Halt and resume multiple instruments
- Amend a closing price for an equity instrument
- Perform instrument trading period changes
- Customer order deletions (individual or multiple) in conjunction with customer approval
- Customer execution and trade report deletions (individual or multiple) in conjunction with customer approval

Market data dissemination and re-request activity

- Check receipt of reference data
- Check receipt of real time market data (orders and prices)
- Infolect Re-request
- Check all appropriate ISV/Software market data functionality

Rollback procedures

- Logout each trading application from TradElect and Infolect
- Restore/rollback production trading application version and data
- Where applicable, re-configure servers/applications for connection to CDS environment.

2.7 High Volume Input Period

The dress rehearsal will include a high volume input period. Members are requested to enter high volumes of trading messages (representative of a normal busy day) into TradElect during this period. Please refer to the session timetable for period timings.

2.8 Test Results Confirmation

At the end of the test session, customers are required to confirm the success of their day's testing. The preferred approach is to complete the **Test Result Confirmation** form (which can be found in Appendix C) to: technicalsupport@oslobors.no confirming all connectivity and functional testing for the migration was completed successfully.

Customers are requested to include confirmation of their readiness for the next trading day's activities following successful rollback testing (where applicable).

2.9 Customer Support / Further Information

During the dress rehearsal, customers should contact the Oslo Børs Service Desk on: +47 2234 1818 or technicalsupport@oslobors.no for technical assistance from 08:30 (CET).

Further information and supporting documentation specific to the Oslo Børs markets' migration to TradElect, can be found at both the Oslo Børs and the Group's websites at the following links:

http://www.obvps.no/obvps_eng/Frontpage/Delta
