Security in NewsPoint InsiderTool

NewsPoint InsiderTool is subject to the already established security routines as the other critical systems run by Oslo Børs.

Storage
The information is stored on separate areas on Oslo Børs' servers and Oslo Børs may only access the information if instructed by the customer. The customer can administrate the storage time for the information.

Logging
All activity in the system is logged, including both logins to the system and all amendments of information. This enables the customer to extract historic insider lists at selected date and time.

Backup
Oslo Børs ensures that NewsPoint InsiderTool and all information stored in the system is subject to backup. The backup makes it possible to recreate information up until 10 minutes before the error occurred.

Encryption
Information in NewsPoint InsiderTool is encrypted according to acknowledged and updated standards for the industry. Information is encrypted when transferred to Oslo Børs prior to storage in all storage media.

Audit
The security in NewsPoint Insider Tool is subject to annual audits. The audit report will be available to customers upon request.

Oslo Børs employees
All Oslo Børs employees has signed a confidentiality statement.

Access control
The customers administer the access to the system and control which information each user may access. To avoid unauthorized access, two-factor authentication is enabled for users as well as for insiders that are to register their information. Insiders that are registering their information does not have access to the system as they submit their information through an electronic form.

E-mail
All e-mails generated by the system will have Oslo Børs as sender. This is to avoid that unauthorized people get access to the email and thereby finds out about inside information in the company. The e-mail includes all information required according to Market Abuse Regulations (MAR). The company may add information to the e-mail, but is not permitted to delete the required information.

GDPR
Storage of personal information in NewsPoint InsiderTool is compliant with the General Data Protection Regulation (GDPR) and all customers will have to enter a Data Processing Agreement with Oslo Børs before information is stored in the system.
